Homework 1

Prepare your answers as a **single PDF file**.
Group work: You may work in groups of 1-3. Include all group member names in the PDF file. You may work with students in both sections (375-01, -02). Only one person in the group should submit to Canvas.
Due: check on Canvas.

1. Use the in-built dataset, `iris`, for this problem. Write code to:

   a. ***Get number of rows (Hint: nrow)***

```
nrow(iris)
[1] 150
```

   b. ***Get number of columns (Hint: ncol)***

```
ncol(iris)
[1] 5
```

   c. ***Show first 10 rows***

```
iris[1:10,]
   Sepal.Length Sepal.Width Petal.Length Petal.Width Species
1           5.1         3.5          1.4         0.2  setosa
2           4.9         3.0          1.4         0.2  setosa
3           4.7         3.2          1.3         0.2  setosa
4           4.6         3.1          1.5         0.2  setosa
5           5.0         3.6          1.4         0.2  setosa
6           5.4         3.9          1.7         0.4  setosa
7           4.6         3.4          1.4         0.3  setosa

i. Get the largest value of Sepal.Length

```
max(iris$Sepal.Length)
[1] 7.9
```

i. Get the row index that contains this value

```
which(iris$Sepal.Length==7.9)
[1] 132
```

j. What Species corresponds to this largest Sepal.Length?

```
iris [ iris$Sepal.Length == max ( iris$Sepal.Length) , ]
Sepal.Length Sepal.Width Petal.Length Petal.Width   Species
132          7.9         3.8          6.4           2 virginica
```

Or:

```
iris[which.max(iris$Sepal.Length),]$Species
[1] virginica
```

For each question, give (1) the code and (2) the output.

2. ***Consider the answer posted to Quora.com to "Why is R great for Data Science?. Answer one of the following questions.***

The author lists 5 parts of the R ecosystem, the 5th being "community". Write 4-5 sentences about any one online community where members discuss R. (Include the URL, how active the community is, what types of people post here, how "friendly" it is to newcomers, etc.)

The URL is https://stackoverflow.com/questions/tagged/r is an online community where members are there to help each other with any issues regarding R. The community looks pretty active due to having 435,188 questions available for one to look at. Due to its active status, the community is considered friendly where they help any members who encounter any issues to the best of their ability. Members include those who use R due to its ability to share code with the person who asked the question.

OR (if you know Python)
The author says "Note that in python, data frame manipulation will require numpy and pandas external packages (and the syntax is more cumbersome)". Do you agree with this statement? Justify your answer in 4-5 sentences.
